

Project Title: **Summer 2022 Evaluations**

Courses Audience: **187**
Responses Received: **131**
Response Ratio: **70.05%**

Subject Details

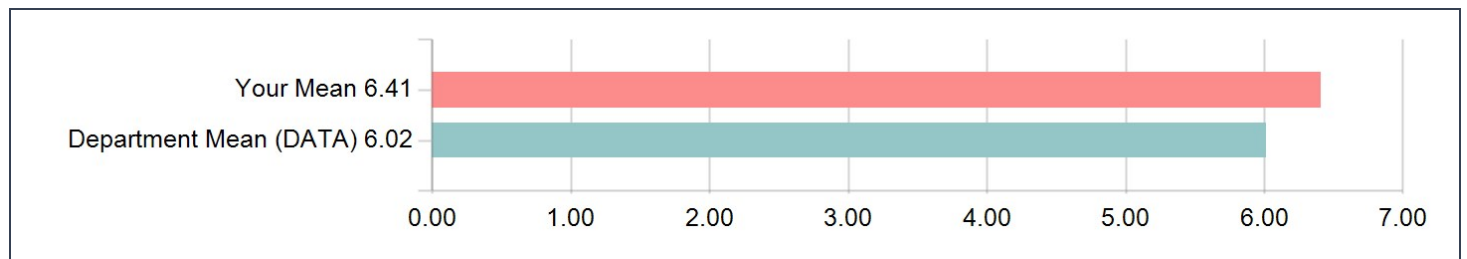

Name	DATA C100 LEC 001 PRINC&TECH DATA SCI (EVAL FOR GSI)
DEPT_NAME	DATA
DEPT_FORM	DATA
EVALUATION_TYPE	G
First Name	Rahul
Last Name	Shah

FOR YOUR INFORMATION: Please note that "Department Mean" for each rating question is calculated using all sections in your department. This may include both Faculty and GSIs depending on whether the department has selected a question item to be used for both.

UNIVERSITY WIDE QUESTIONS (QUANTITATIVE/RATING):

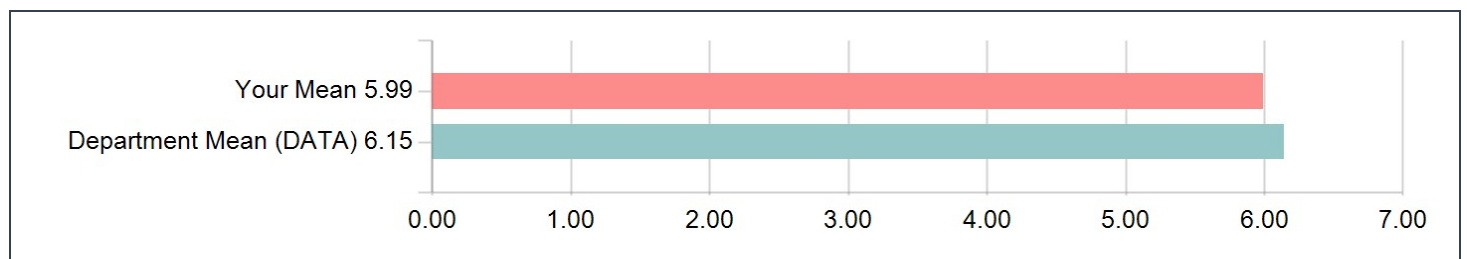

The items in this section are asked across all courses at Berkeley.

Considering both the limitations and possibilities of the subject matter and the course, how would you rate the overall effectiveness of this graduate student instructor?

Considering both the limitations and possibilities of the subject matter and the course, how would you rate the overall effectiveness of this graduate student instructor?		
Options	Count	Percentage

What do you think are the strengths of this instructor?

Comments
References further learning for curious students, gives good mini-lecture.
explaining confusing concepts
N/A
He explains the concepts well.
Ability to explain concepts well
Rahul explained concepts in great depth and was very welcoming to students' questions. I would recommend him to teach a section again.
He treated students patiently and was always willing to answer our questions.
Having high energy and keeping engagement high.
Helpful during office hours
Very approachable and engaging way of lecturing.
Rahul was extremely helpful not only in Office Hours, but also outside of it when I asked him questions. Definitely a great instructor.
Rahul is very patient and very encouraging. Usually when I go to office hours, I sometimes feel that TAs are usually there just to do their job. Rahul seems more like a friend who genuinely wants to help. I usually go to his Monday office hours and every time I get help, I have a better understanding of the topic and I feel confident afterwards. Also, he fosters a very participating discussion section and I always like to participate. I really enjoyed this class and having Rahul as my GSI. In fact, I was actually to get a part-time summer job doing almost the exact same work I did in the class. I'm sure many more students will benefit from him and I really hope he TAs for my future classes.
/
Great discussion explanations and well-run discussions.
Energetic.
patience
very clear instructions
Literally the best, would help out everyone and would explain everything so clearly. Helped on multiple platforms and was super approachable! THANK YOU SO MUCH!!!
I have seen many of Rahul's discussion recordings, and he always does a great job encouraging student questions and preparing students for questions and concepts they may see on exams.
N/A

DEPARTMENT PROVIDED COURSE QUESTIONS:

Items in this section were selected by DATA for inclusion on this evaluation.

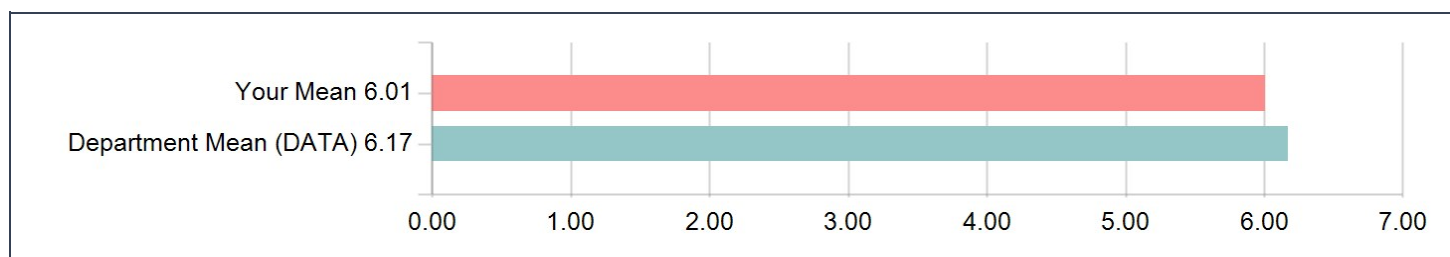

The course was effectively organized.

The course was effectively organized.

Options	Count	Percentage
1-Strongly disagree	1	0.81%

What did you like about the course?

Comments
Doing practice problems in discussion section
It was very rigorous and taught me a ton about how to apply data science techniques and understand the theory behind it.
I like that the course covers such a wide breadth of concepts. It makes it very easy to understand the vast potential of data science.
Covered many things
The sections were very useful in practicing the skills learned in lecture.
Labs are super useful for applying what we learned in class. I felt empowered by the course, not unnecessarily challenged. All content is extremely useful and immediately applicable to personal projects.
Everything!
Discussion was simple, guided, and collaborative.
Effective review and further supplement of lecture content.
Mostly the pace.
The topics were very interesting and the projects definitely helped to improve my skills.
What I've learned could be applied to real-life world
same as the EVAL NOT FOR GSI
Challenging homeworks and projects
I enjoyed the projects and homework assignments, both of which I thought prepared me for practical applications for data science skills in the real world.
Resources available and how applicable the class is in real life
It helped me understand a lot of technical and hands on concepts.
The course was very organized and I found that the materials were very informative even if I had not watched the relevant lecture ahead of time.
I have no idea.
What I liked about the course was how applicable and interesting it was. It translated directly to my part-time job and I'm super grateful.
The content of the class is super useful for the future.
The well structured outline and well organised tutorials
I felt that a lot of the content had real world applications.
I enjoyed the content and the assignments!
The content.
useful
it's really good
There was a lot of supplemental work and help provided/offered.
the topics that it covered
I really like how the course emphasis the mathematical underpinnings of data science, which lets me apply my knowledge of calculus and linear algebra to machine learning applications.
Loved applications to real life
N/A
I liked the grading system. The option to go to discussion being non-mandatory was a strength.
All the homeworks

What, if anything, do you think would improve the course?

Comments
Less homework
While I think a lot of the statistical background is interesting and important, I feel some of the emphasis put on the mathematical concepts can be a little excessive, particularly when we can code much of what is being taught. This is certainly just a preference since I like to see more direct applications like coding fundamentals as opposed to the statistical/calculus foundations, but I do think the latter is important; there just seems to be an oversized emphasis on that knowledge. Also, some more focus on SQL/databases could be a great addition!
More conceptual questions for homeworks to prepare for the exams
I would have the section teachers practice the discussion sheet and time themselves going through it, so that we could get to all the questions.
Have optional labs of increased difficulty to practice for the exams.
None.
I think the current course schedule is good enough.
Better connection with her iPad, but honestly she a perfect GSI
More coverage of misc. topics
Discussion like office hour so people wouldn't have to wait that long.
same as the EVAL NOT FOR GSI
I think organized group sessions for office hours, especially for harder questions on the homework could be helpful in clearing up some traffic for other students to get help in a timely manner.
Very fast pace for summer to learn difficult concepts and tie concepts together.
Sometimes I found myself confused with instructions while doing the projects, perhaps more clarification could be helpful.
I have no idea.
I think the content can be a bit more concise since I usually takes notes during lecture. But overall I was able to build my intuition which I think helped for the final exam.
/
I think the course is fine.
The TAs at OH were always impatient and even at times, seemed aggravated. I don't know if it was us students or if they were burnt out, but something needs to be addressed about that?
N/A
n/a
nope
The GSIs had a lot to cover in a short 1-hr discussion, so maybe something relating to pacing / content distribution.
maybe the office hour could use live form?
There wasn't much intuition provided/emphasized for a lot of the ML topics
I think having more support for homework assignments and projects besides just office hours would be helpful, since I have found that many people scramble near the deadline with the same questions.
Shorten assignments; ended up taking about 2-3 hrs a day on top of lectures
Please! Stop giving unreasonably challenging and confusing homeworks!!! Please also make the labs less insane!
N/A
I wish the lectures were held at an earlier time. Being on the East coast meant I was forced to watch the lectures in the evening or the next morning. This also ate up a lot of my time, as I was also taking another Berkeley summer course. Waiting for Office Hours could sometimes be tedious and time-consuming. The instructions on the labs, homework, and projects could be confusing, convoluted, and omit important information that would help the students tremendously. I would like to see more information explaining what was asked of students on the homework, labs, and projects.
none

What advice would you give to another student who is considering taking this course?

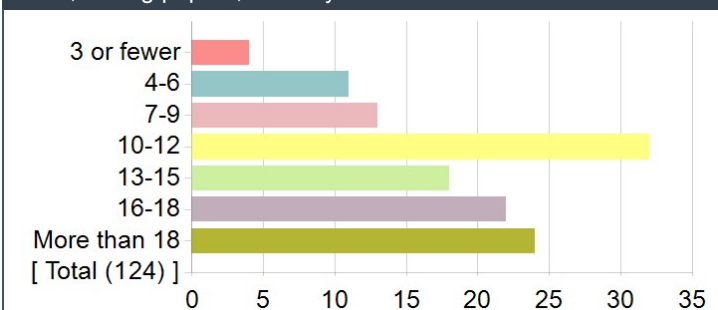

Comments
second half is more difficult, mentally prepare for that
Go to lectures, take problems as learning opportunities, and make sure to have a solid math background.
Don't just go through the motions. Actually understand the questions
Go to section! Very useful, especially if you didn't understand the topic covered in lectures.
Do a set amount of work each day to keep up.
You can learn a lot of useful skills even you do not consider being a data science student. Just come and have fun!
Go to discussion.
Interact with teachers more.
Absolutely look for a good GSI, it makes understanding the content a lot easier.
Understand each concept thoroughly
same as the EVAL NOT FOR GSI
Taking seriously
I would suggest pacing out the material evenly throughout the week, it is very easy to fall behind and many of these concepts are hard to grasp the first time around.
Be ahead of the class by 1 day.
Start work early
The resources provided are meant to be used.
Be focused on anything you learn, it would help you succeed in this course.
Always take notes! This is the first class where I had more time so I spent more time and building conceptual understanding absolutely helps.
Spend more time
Make sure to go to office hours if you have any questions, as many concepts build upon previous ones.
Have a strong foundation in the pre-reqs, and start assignments early.
N/A
take it!
go to office hour
Attending discussion is helpful because you get to apply the concepts that you learn in lecture to actual problems.
try to understand the intuition not just the concepts
I would advise someone else taking this course to brush up on calculus and linear algebra knowledge before and during the course, as well as to emphasize thinking critically with the Pandas library.
Start assignments early
N/A
Do not take this course with another course. Data 100 is extremely time-consuming and at times very confusing.
Take lectures

DEPARTMENT PROVIDED STUDENT INFORMATION QUESTIONS

Items in this section were selected by DATA for inclusion on this evaluation.

On average, how many hours per week have you spent on this course, including attending classes, doing readings, reviewing notes, writing papers, and any other course-related work?

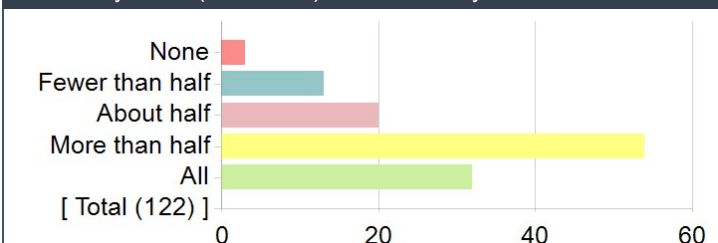

On average, how many hours per week have you spent on this course, including attending classes, doing readings, reviewing notes, writing papers, and any other course-related work?

Options	Count	Percentage
3 or fewer	4	3.23%
4-6	11	8.87%
7-9	13	10.48%
10-12	32	25.81%
13-15	18	14.52%
16-18	22	17.74%
More than 18	24	19.35%
Statistics	Value	
Response Count	124	

How many class (or section) sessions did you attend?

How many class (or section) sessions did you attend?

Options	Count	Percentage
None	3	2.46%
Fewer than half	13	10.66%
About half	20	16.39%
More than half	54	44.26%
All	32	26.23%
